Selected Projects

Niloofarnk | Artmostfree | Delysium | Delysium market | Chimige | WordsTellArt | LucyOS

Work Experience

rct AI (Software Engineer / Tech Lead)
December 2021 – Present

- Utilizing React, Vue and Vanilla JS to build performant NFT marketplace, blockchain and web3 tools.
- Leading the blockchain development team for web3 and chain tools/services within the Delysium Project.
- Creating frontend design systems, using Storybook UI workshop to create reusable cross-project components.
- Release and deployment management with Github Actions, Vercel and automation on Jira.
- Engineering management, mentorship, hiring and interview and resource allocation for tech.

H/A Studio (Lead Frontend Engineer)
April 2021 – December 2021

- Kick-starting the project from scratch with JavaScript tech stack (ReactJS, React Native, Express and Node).
- Leading a team of developers to build an accessible LMS from scratch.
- Consistent communication with designers and leadership to set technical goals and roadmap.
- Mentorship for frontend interns.

Speechtopia (Frontend Engineer)
April 2020 – March 2021

- Building an online debate platform for young debaters with focus on Canadian and Asian market.
- Co-designing complex, innovative online debate systems.
- Coding frontend from scratch using React, React context/state hooks and fully customized Material UI.
- Designing UI and UX for product.

BoostUp Space Group (Frontend Engineering Intern)
May 2019 – April 2020

- Designing and Building UI blocks and components with earlier versions of React.
- Coding frontend for a comprehensive CMS from scratch.
